The concept of business intelligence (BI) is simple: get the right information to the right decision-makers at the right time regardless of the mishmash of systems and sources where the data resides.

CRG Rapid-Fire BI: A New Approach

Rapid-fire BI is a new approach to delivering business intelligence. It lets users explore and analyze the information that they need – independent of IT. In fact, rapid-fire BI leverages the existing IT infrastructure, and it satisfies IT controls and protocols. Rapid-fire BI is enabled by IT, run by business.

Rapid-fire BI is the business user's best friend. Complex data, from various sources, is presented a visual format. Actually seeing the information helps the business understand and make better business decisions.

A picture is worth a thousand words!

Presenting data in a visual format helps to identify patterns, trends and exceptions in complex data sets. Visually presenting the data promotes understanding and facilitates better decision making.

Rapid-Fire BI Attributes:

User-Driven Approach – analytics and reporting are decentralized and produced by the people who actually use the information. IT provides the infrastructure, but the users create their own reports and dashboards.

Easy Visual Interfaces – the user interfaces leverage the human brain and natural curiosity. The results are visual and interactive. As users get their answers faster, they become more effective.

Flexible Configurations – organizations need BI based on their current needs without inhibiting growth.

High Performance – BI needs to be fast and responsive for all users.

Easy Administration – a BI solution should not require additional staff or infrastructure.

Delivering Rapid-Fire BI

Delivering rapid-fire BI requires the right combination of people and tools. Corporate Renaissance Group (CRG) has both!

- CRG has a team of experienced BI professionals who can help transform data into decision-making information.
- Tableau Software is business intelligence software for faster analytics and better business dashboards. It allows users to see data clearly by using data visualization capabilities.
