Solutions that go beyond Microsoft Dynamics GP

We are a unique channel partner. Not only do we excel in implementing Microsoft Dynamics® GP, our capabilities and expertise also extend to areas that can significantly improve your performance and reduce costs.

Collaborative Enterprise (SharePoint)

Our collaborative enterprise services team will ensure that everyone from senior executives to employees will have access, from one central location, to the latest information that they need, bringing you close to a paperless office. Our solution will help you improve business insight; manage content, process and workflow; and simplify internal collaboration, improve efficiency and significantly increase the speed of decision making

Let our team and Microsoft® Office SharePoint® Server transform your enterprise into a truly collaborative enterprise.

Balanced Scorecard & Logic Models

Measure what matters most. We use our Value-Based Performance Management framework to provide you with insight into what metrics are needed to satisfy the diverse interests of your stakeholders.

We can help you identify strategic objectives, link performance metrics to those objectives, and provide you with a platform to provide insight on key performance indicators that matter.

We primarily use two solutions when developing your enterprise dashboard:

- Enterprise Scorecard® from CRG, and/or
- Microsoft® Office PerformancePoint Services

Enterprise Scorecard...allows you to monitor your strategic long-term goals, operationalize goals, discover opportunities for process improvement, and recognize potential performance problems.

PerformancePoint Services...provides everything you need to manage performance; including scorecards, dashboards, management reporting, and analytics.

Business Intelligence

Many enterprises are data rich and information poor. While scorecards provide high level insights, the true benefit results from building an analytics platform that encompasses every critical data source in the enterprise to find the elusive "single version of the truth". The CRG BI team provides a complete end-to-end solution for all your analytical challenges. We will:

- Identify your business intelligence needs
- Provide a unique solution for your organization
- Deliver web-based, on demand management briefing books, dashboards, scorecards and key performance indicators
- Transform data from multiple, diverse formats and data bases into information
- Leverage the Microsoft Business Intelligence Suite of products

Strategic Cost Management

The need to know the true costs of activities and processes and to link these to product-client profitability has never been more critical than now. Our cost management team incorporates activity-based costing and management (ABC/M) methodologies and provides deep insights into the costs of activities and services and profitability of business units, products, channels, and clients.

We offer world class costing solutions:

FlexABM®...an enterprise-wide ABC/M solution that identifies the true costs of activities/services and profitability of products/clients. It provides analytical tools, models, and methodologies to evaluate business processes.

CRG Cost Allocator® ...a costing application that performs multi-level step-down cost allocations by percentage, cost drivers, or balance of other accounts.

Customization

We have been developing products and applications for twenty years in the Microsoft world. Our developers have brought products such as Changer and Re-Formatter to the Microsoft Dynamics GP world. We have developed many customized solutions for our clients using Dexterity, and .NET. If you want solutions that require customization, contact us - we can do it for a price you can afford and within your time frame.

Training

We are known for our trained consultants and for our learning-friendly training material. We can train on-site or on the web. Contact us to find out how we can help you with relevant, practical, user-friendly training: Microsoft Dynamics® GP, Microsoft FRx, SQL Server Reporting Services, SharePoint, Performance-Point Services and more.

Other Areas of Expertise

CRG possesses expertise in the areas of value-based management, shared services, executive compensation and strategic management.

The CRG Consulting Services team uses...

About CRG

CRG has been delivering performance and results since 1989. We pride ourselves on being the go-to Microsoft experts for business solutions. We use Microsoft technologies to help companies improve financial and operational performance and increase efficiency: Dynamics GP, SharePoint, PerformancePoint Services, Dynamics CRM and the Microsoft Business Intelligence Suite. Our expertise extends beyond Microsoft technologies; we offer assistance with costing, dashboards, reporting, business intelligence, shared services, management consulting, and employee performance management. Back-end to front-end, our solutions will help organizations improve performance.
